

01. What is DevOps?

DevOps is a process of improving the application delivery by ensuring:

- Proper automation with a code quality
- Continuous monitoring
- Continuous testing in place

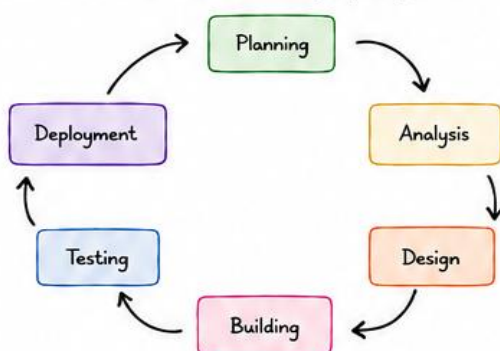

02. Why DevOps?

03. SDLC with DevOps

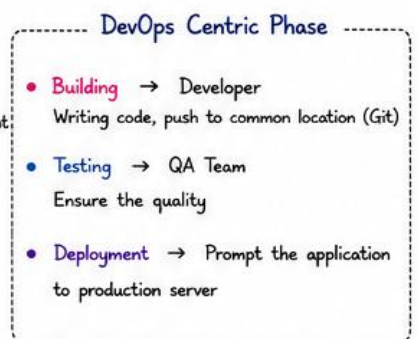

Software Development Life Cycle (SDLC) is a set of standard steps followed in the software to deliver a high quality product.

- **Planning** → Gather requirements
Understand what the customer needs.

- **Analysis** → Documents
 - Software requirements specification (SRS) document
 - Other analysis documents

- **Design** → HLD & LLD
 - HLD: What the system looks like
 - LLD: How each part is built

Then customer receive it and use the application.
